Henderson County **Ruiz Report** January, 2025

At A Glance: Volume (vs. last month) (vs. this month last year)

Henderson added **57 more** new listings to the market than it took off (put under contract), **which increased the overall supply**. Home sales (*closings*) **decreased** in January, just remember that many of those homes went under contract in a *previous* month.

Learn the lingo

Active Listings: This is the total number of listings that were for sale *at any given point during the month*.

Under Contract: This is the total **number** of listings that accepted an offer to purchase *during the month*.

Under Contract (%): This is the "Under Contract" column represented as a **percentage** of the county.

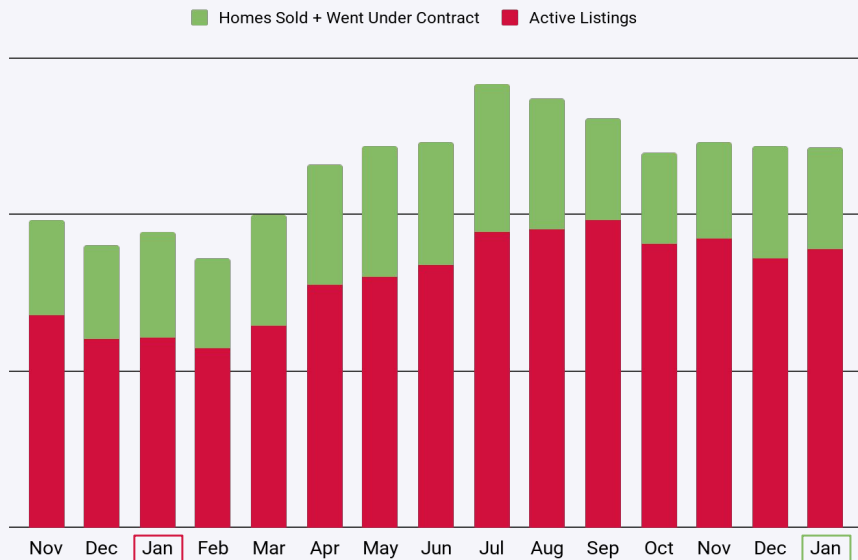

Pending Ratio: This ratio is calculated using a **snapshot** taken at 11:59pm on the last day of the month. It used to show a price range's competitiveness by comparing the number of listings under contract to the total number of listings on the market at the time the snapshot was taken (active + under contract).

Months of inventory represents how long it would take to deplete the current inventory assuming no new homes are put on the market. It's commonly used to determine the health of a particular market.

Between 0-4 months of inventory is considered a seller's market because supply is relatively low, which means that sellers have more control to set terms or raise prices. **5-7 months signals a balanced market** - there is a healthy mix of buyers and sellers. **8 or more months of inventory indicates a buyer's market**, which means buyers have more negotiating power.

Seller's Market Buyer's Market

Volume & Activity

- The number of active listings *increased* by 3% in January. **Total Active listings, the number of properties listed for sale at any point during the month, was up 46% compared to last year.**
- Total homes under contract increased 8% from last month, but **Henderson had 15% less homes under contract in January than it did this time last year.**
- Overall volume was up 4% from last month and up 30% from this time last year.

Listings & Pendings

- **New listings increased 60% from last month**, and were up 45% from last January's numbers.
- **8% more homes went under contract**, but Henderson had less homes going under contract than this month last year, down 15%.
- **Pro Tip:** keeping an eye on the difference between homes added to the market (new listings) and those taken off (by going under contract) is the best way to gauge supply & demand!

Home Prices

The **median price** is the “middle price,” meaning half of the homes sold during the month were cheaper and half were more expensive than the median. The **average price** is the total sales divided by number of sales.

- The average home price in Henderson County increased 2%, and homes were valued 11% higher compared to last January.
- The positive home value appreciation trend *seems* to be holding despite interest rates. **Pro Tip:** monthly price fluctuations are less indicative than annual trends for understanding market shifts!
- The consistently higher average vs. median home price tells us that **Henderson’s high-end market is strong**, with prices significantly higher than the rest of the market.

Days On Market

- On average, homes took 10-days longer to go under contract than they did in December, and the *median days it took to sign a purchase contract was 22-days (!!!)*.
- Homes between \$700-799k sold fastest in January, with a *median* 3-days on the market, followed by homes in the \$200-249k range, which took a *median* of 4-days.
- Homes in Henderson are selling quickly due to a combination of extremely low inventory and high demand for homes.

The **median DOM** is the “middle DOM,” meaning half of the homes during the month went UC faster and half took longer than the median. The **average DOM** is the total DOM divided by number of sales.

Contract To Close

- **Contract to close time took an average of 4-days more compared to last month, which was 8-days faster compared to last January.**
- **Homes valued between \$450k-499k took among the longest to close.** January closings data put that segment at around 104-days, on average.
- **Homes valued between \$1.5M-1.99M closed fastest,** closing in ~8-days, on average.

Contract To Ca\$h

- Sellers got paid an average of 13-days *slower* after listing their homes according to January sales data, but **28-days faster than Jan., 2023.**
- This overall increase was a due to increases in both time spent during the contract to close process as well as time spent on the market (DOM).
- Homes valued **valued between \$900k-999k sold fastest**, averaging 38-days, **followed by the valued between \$250k-299k price range** which took 47-days, on average.

The **median Contract to Ca\$h** is the “middle number,” meaning half of the homes that closed during the month got paid faster and half took longer than the median. The **average Contract to Ca\$h** is the total time it took across all price ranges divided by number of sales.

Methodology

Data for this report was pulled from Canopy MLS for Single Family and Condo/Townhouse properties on February 3rd, 2025. Realtors are required to update their transactions on the MLS within 48hrs, so while most records for the month should have been accounted for, any updates that occurred after the report was pulled will not have made the cut. This should not have a material effect on the data given the overall volume of transactions.

Please send me an [e-mail](#) if you have any comments, questions, requests, or corrections.

See below for some relevant formulas.

$$\text{Months Inventory} = \frac{\text{Active Listings This Month}}{12\text{-Month Pending Homes Average}} \quad \text{Pending} = \frac{\text{Under Contract End Of Month}}{\text{Active End Of Month}}$$
